metatarsus of the foot consists of five long bones which are called the
metatarsals like the metacarpals of the hand the metatarsals are comprised of
a proximal base a shaft and a distal head along with the tarsals the
metatarsals help form the arches of the foot which are essential in both
weight bearing and walking the metatarsal bones in a whitetail deer are the
longest bones in the deer s skeleton these bones make up the deer s lower leg
the deer s legs are perfectly designed for running and jumping a deer walks
on his toenails instead of his toes the deer s front legs are designed to
give the deer the ability to pivot quickly and easily the first metatarsal
bone is the stoutest and the shortest of the metatarsal bones the body is
strong and of well marked prismoid form the base usually has no articular
facets on its sides but occasionally on the lateral side an oval facet exists
by which it articulates with the second metatarsal metatarsal labeling
diagram as an amateur anatomist i motion to label this prominent prayers spot
