How to Test a Mercury Outboard Solenoid It Still Runs
April 20th, 2019 - The solenoid on a Mercury outboard motor is used to actuate the starter. It is nothing more than a remotely activated switch. It takes considerable amperage to operate the starter which in turn requires a large diameter wire to carry the load. There are four terminals on the solenoid: two large diameter posts and two.

**Choke on mercury outboard motor wont turn off Yahoo Answers**
April 13th, 2019 - I have seen quite a few Mercury techs break the momentary switch inside there upon reassembly. Just one of a few things to look out for when taking that apart. You can also disconnect the choke solenoid on the motor and use a multimeter to test the electrical going back to it along with the solenoid itself.

**Engine Start Procedures and Narrative Moderated**
April 17th, 2019 - One push makes the solenoid operate once so holding it doesn't do anything. In my outboard experience, it is usually best to pump the fuel line primer bulb until it gets stiff, push the choke once or twice, turn the motor over a few times, and then re-pump the primer bulb. Your outboard really shouldn't run too roughly at idle though many do.
