MSE is an important part of the clinical assessment process in psychiatric practice. It is a structured way of observing and describing a patient's psychological functioning at a given point in time under the domains of appearance, attitude, behavior, mood, affect, speech, thought process, thought content, perception, cognition, and insight. The purpose of the MSE is to obtain a comprehensive cross-sectional description of the patient's mental state which, when, mental status examination and documentation, a mental status evaluation is a necessary part of any client assessment. No matter what the presenting problem is, it should be documented in the record either in list form or in narrative form. This article illustrates both the list and the narrative, the mental status examination. MSE is based on your observations of the client and is not related to the facts of the client's situation but to the way the person acts, how the person talks, and how the person looks while in your presence. A mental status examination can be an abbreviated assessment done, brief mental status exam MSE form 1 appearance, casual dress, normal grooming, and hygiene. Other describe 2 attitude, calm, and cooperative. Other describe 3 behavior, no unusual or bizarre beliefs and perceptions, eg. delusions, hallucinations. Mood and all aspects of cognition, eg. attention, orientation, memory. If you can remember the mnemonic, you are on your way to a succinct yet thorough mental status exam. Need a checklist style mental status exam to incorporate into your EHR? One created by Jeff Patrick, the Mental Status Examination Rapid Record Form.
