Buying a Vito:
Hi all, I am new to this forum so hello to everyone! I joined the forum as I am looking to buy a used Vito and was interested in people's opinions. I am looking into buying a van for several reasons: work, holidays, and carting my motorbike about. In addition, it will be my everyday car.

How to reprogram your car's engine immobilizer to program new keys in the event of lost keys or a swapped ECU.

Disclaimer:
The engine immobilizer is a security device; use the info. The Mercedes dealer no longer provides them, but ECU Team does.

Immobilizer anti-theft:
The Mercedes-Benz immobilizer system is one of the most complex and advanced in the automotive industry. It contains security settings for each specific Mercedes vehicle. The key information must match if one of the components is not programmed correctly or you use new immobilizers.

I have immobilizer problems with my car; the key broke, and the immobilizer won't let the car start. I need a new key, and immobilizers can be very expensive. Is there a chance to get the immobilizer off this car's ECU?

ECU is Bosch ME20, and here is the file:

Hi,
Let you schematic to do with the Julie emulator friend, maybe your Mercedes ECU electronic control unit is defective or causing your car to act up.

Not too long ago, you would need to go to a dealership to replace your Mercedes ECU, costing you thousands of dollars. Luckily, this is no longer the case. We can help you with a plug and play ECU which will include all VIN and immobilizer.

Our Mercedes remanufactured ECUs come in two variants: plug and play or unlocked. Plug and play ECUs require no additional programming:

- VIN:
- Immobilizer:
- SSID:
- Data key hashes:
- Software coding:
- Also, SCN coding will be transferred.

Original keys will work, and the car will have the correct VIN for emission tests.

Mercedes-Benz immobilizer anti-theft bypass:
How it works. There is a small chip in the ignition key called a transponder. When the key is inserted into the ignition switch, it sends a code to the vehicle's computer through a receiver coil mounted to the barrel. Once the computer receives the code, it grants the car start approval.
