The Mercedes-Benz M120 engine is a high-performance automobile piston engine family used in the 1990s and 2000s. It is the most powerful Mercedes-Benz car engine of its day with a rated power output of 300 kW (408 hp). The M120 was an entirely new design that not only suffered the same problems with wiring as its V8 counterpart but also had densely packed engine bays and complex interiors, making regular maintenance less pleasant than that of the V8. The M120 engine was used in the Mercedes-Benz S Class (W220) and other high-performance models, contributing to the car's high performance and luxury attributes.

The Mercedes-Benz W220 was a series of flagship sedans that constituted the Mercedes-Benz S Class during the early to mid-2000s. It was developed in 1992 and was a milestone in automotive design. The final design was approved in June 1995, and production began in August 1998, 38 months ahead of the initial design phase. The engine wiring harness for an SL 500 costs £714 from the main dealer, which reflects the complexity and cost associated with maintaining these high-performance models.

The M120 engine is a reliable and powerful option for enthusiasts looking for a high-performance engine in their Mercedes-Benz vehicle. With its DOHC design, the M120 engine provides excellent performance and long-term reliability, making it a popular choice among Mercedes-Benz owners and enthusiasts.
